

FeedComp

MANAGE YOUR FEED ASSETS

FeedWatch, feed management software designed from a philosophy of flexibility while maintaining complete analytical ability. The software will monitor feed usage, sales, purchasing, animal intakes and cost. User friendly FeedComp on the VAS Platform enhances the function of the desktop.

- ⬆ Increase feed efficiencies
- ⬆ Increase production
- ⬇ Decrease feeding time
- ⬇ Decrease waste
- ★ Boost your bottom line

FeedComp on the VAS Platform

"The biggest benefit of FeedWatch, right out of the gate, is the ability to monitor what the feeders are actually putting into the feed boxes and really be able to look at it in real time, [and] have the errors and exceptions reports. We're actively using it to monitor our inventories and the cost of our production, feed costs and how it affects our milk cow production."

*"We're not wasting near as much feed. We're getting it all into them. We really haven't lowered our feed cost, except for on a hundred weight of milk basis, which is what we look at anyway."
Jim Whitehurst, Shamrock Farms, Arizona*
